- Partial services are guaranteed for the work performed only.

GENERAL CONDITIONS FOR BREGUET WATCHES OUT OF GUARANTEE

To make a diagnosis of your timepiece, our watchmaking service will have to open the case in order to gain access to the movement. In the case of a refusal of the proposal or a return, we do not guarantee the functioning of the watch, even if it was functioning at the time of deposit. Only a partial or full service(depending on the diagnosis) can ensure the correct functioning of the watch. We provide a 12 month guarantee* on partial maintenance service and a 24 month guarantee* on full maintenance(*from the date of leaving the workshop). Maintenance work carried out by the BREGUET Boutique is exclusively guaranteed by BREGUET Service Centers.

Our workshops reserve the right to replace the hands, crown, push buttons, and crystal of your watch by original pieces or by BREGUET components of their choice that are comparable , aesthetically similar and maintain the same functionality.

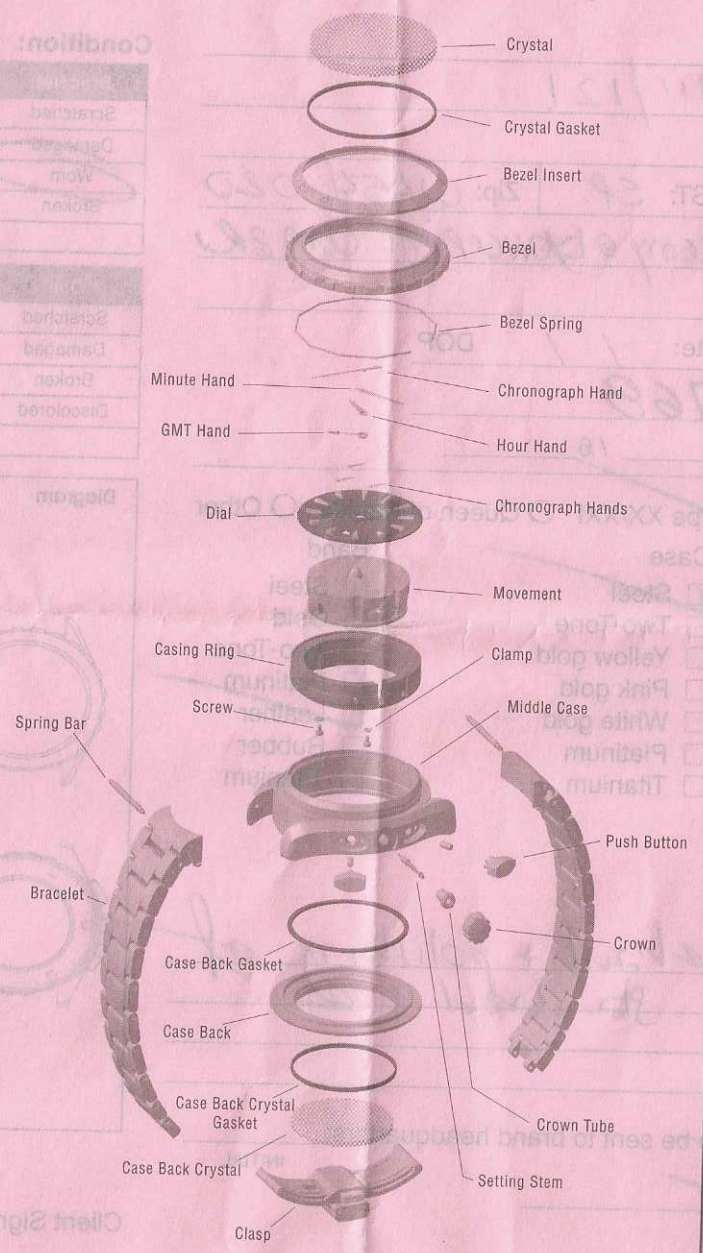
The conditions of our service are described in the "USEFUL INFORMATION" section and are binding.

USEFUL INFORMATION

What are the service intervals?

Like any high-precision instrument, a watch needs to be serviced regularly in order for it to work perfectly. Obviously, we cannot indicate the exact intervals for such work, given that it depends entirely on the model, climate and the care taken by the watch's owner. As a general rule, it is between 4 and 5 years, depending on the use of the watch.

Watch Parts



USEFUL INFORMATION

What work is included in a complete maintenance service?

- Dismantling, cleaning, assembly, oiling of the watch movement
- Repair or replacement of worn or damaged movement parts
- Adjustment and regulation of the timekeeping to factory specifications
- Replacement of Crown, Push-Buttons, Gaskets, and Battery (if applicable)

*Special Mineral or Sapphire Crystals and Precious metal parts invoiced separately

- Restoration of Water Resistance to factory specifications
- Refurbishment of Case and Bracelet to factory specifications
- Final Visual and Technical Inspection - including timekeeping, additional functions of the watch, and aesthetics

What should I do to ensure that my watch continues to provide excellent service for many years?

Magnetic fields: avoid placing your watch on speakers or refrigerators, since these have strong magnetic fields.

Bathing in the sea: always rinse your watch with warm water afterwards.

Shocks: whether thermal or other, avoid them.

Crown: screw it in carefully to ensure that no water enters the mechanism.

Cleaning: for metal bracelets and for all water-resistant cases use a soft brush with soapy water and a soft cloth for drying.

Chemical products: avoid direct contact with solvents, detergents, perfumes, cosmetic products etc., since they may damage the bracelet, the case or the gaskets.

Temperatures: avoid extreme temperatures (above 60C, or 140F, below 0C, or 32F) or extreme temperature changes.
